

LANDSCAPE '06

A R C H I T E C T U R E

The canvas of our country's physical realm is being modified drastically at a scale that is unprecedented. The landscape architects' involvement is critical in development works of varying scales and typologies. These comprise of a complex range of projects that include infrastructure projects, regional landscapes, housing, institutional, recreational, urban, heritage, industrial and residential projects. In addition to developing technical capabilities, the landscape architect today, needs to develop a critical sense of the profession and evolve a value system and a keen sense of inquiry, which will allow appropriate responses in such times of flux. The program at Faculty of Architecture, CEPT University is designed carefully to allow this comprehensive and in-depth understanding of the profession.

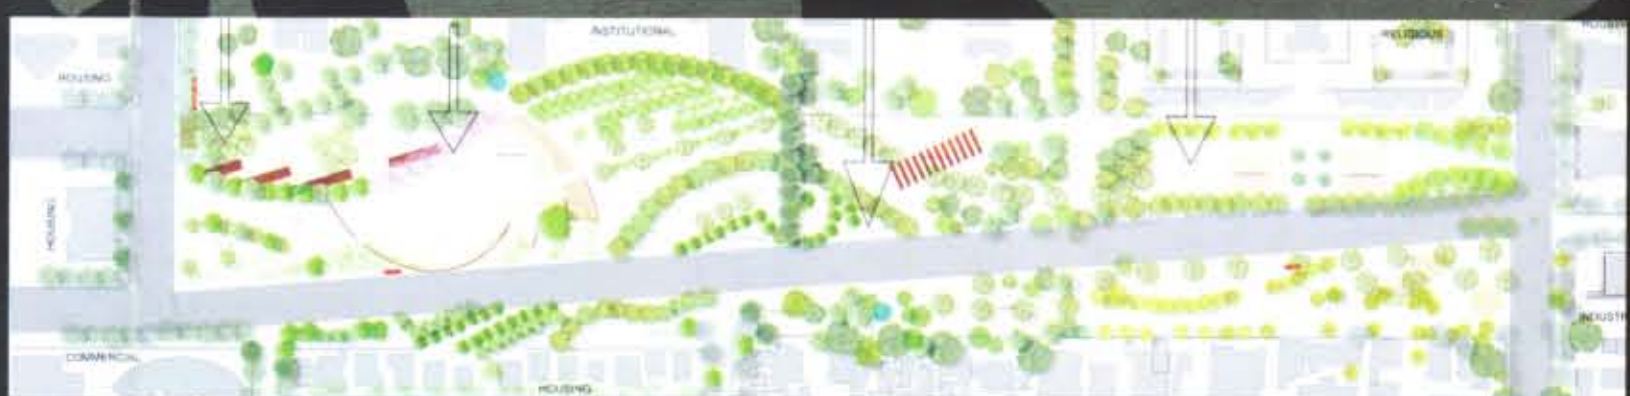

The container...
and not...
the contained

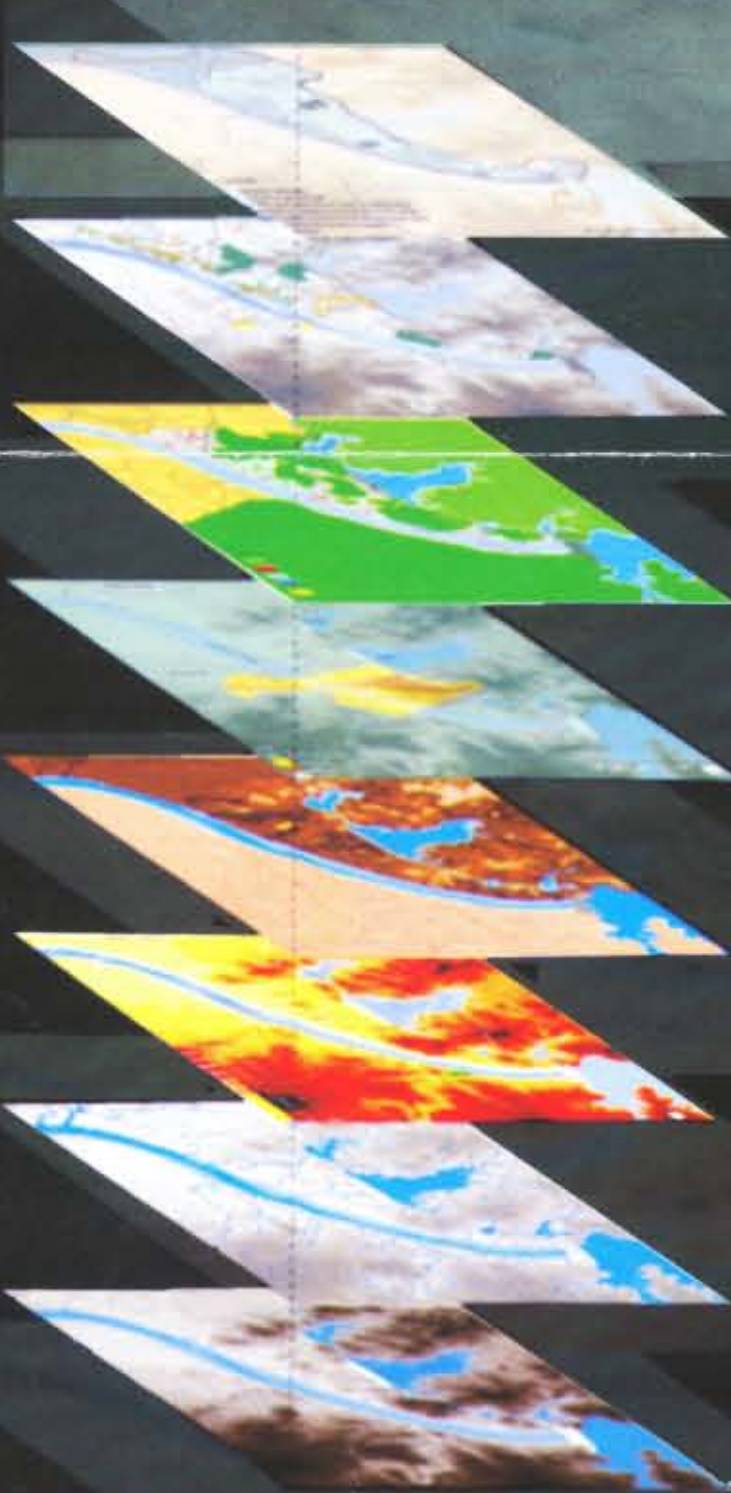

Concept

Nature as the container and not contained... a fluid space which will expand or contract over time into surrounding context and so create a green space boundless in time and space.
